

DENTALPILOT MARKETPLACE

Marketplace Policies & Customer Service Knowledge Base

POC / RAG Training Edition

FOR POC / RAG TESTING ONLY

SYNTHETIC CONTENT - NOT NET32 TERMS OR POLICIES - NOT LEGAL ADVICE

Net32.com was used only as a structural reference for a multi-vendor dental marketplace experience. All marketplace names, contact details, thresholds, SLAs, prices, and policies in this document are fictional unless explicitly labeled otherwise.

Contents

1. Marketplace overview and seller model
2. Customer eligibility and account registration
3. Inventory, pricing and seller comparison
4. Order lifecycle and payment
5. Shipping, tracking and delivery
6. Returns, refunds and exchanges
7. Damaged, missing and defective products
8. Warranties, expiration and recalls
9. Product authenticity, substitutions and backorders
10. Promotions and price adjustments
11. Seller disputes and account security
12. Privacy, AI and voice disclosures
13. Human escalation, support hours and SLAs
14. Knowledge precedence rules for Piper

MP-001 - Marketplace Overview

DentalPilot Marketplace is an online marketplace designed for licensed dental professionals, dental practices, dental laboratories, educational institutions, and other approved healthcare businesses in the United States.

DentalPilot allows customers to compare dental products from multiple independent sellers within a single shopping experience. Products may include infection-control supplies, disposable products, restorative materials, preventive supplies, impression materials, endodontic products, hand instruments, rotary products, orthodontic supplies, imaging accessories, laboratory supplies, and small dental equipment.

DentalPilot does not manufacture products offered by third-party marketplace sellers unless a product is specifically identified as a DentalPilot private-label product.

MP-002 - Marketplace Seller Model

DentalPilot operates as a multi-seller marketplace. A single customer order may contain products supplied by different sellers.

Each seller is responsible for maintaining accurate inventory, packaging orders, shipping products, and complying with DentalPilot seller standards. Because products may come from multiple sellers, a single checkout may result in multiple shipments, tracking numbers, delivery dates, and packages.

Customers do not need to place separate orders when purchasing from multiple sellers.

MP-003 - Customer Eligibility

DentalPilot primarily serves professional and institutional customers, including dental practices, dentists, hygienists, dental laboratories, dental schools, clinics, hospitals, healthcare organizations, and authorized purchasing organizations.

Certain products may be restricted to verified professional accounts. DentalPilot may request business information, professional credentials, tax documentation, or other verification when required.

MP-004 - Account Registration

Customers may browse products without creating an account. An account is required to place an order.

Registration may request business name, customer name, email address, phone number, billing address, shipping address, and optional tax-exemption information. Customers are responsible for keeping account information accurate.

MP-005 - Product Availability

Inventory displayed on DentalPilot represents the most recently reported inventory from the marketplace seller. Inventory may change before checkout is completed, and placing a product in the cart does not reserve inventory.

Status	Meaning
In Stock	Available for normal processing
Low Stock	Limited quantity remains
Backordered	Temporarily unavailable but may be ordered
Out of Stock	Cannot currently be ordered
Discontinued	Will no longer be replenished
Special Order	Seller obtains product after order is placed

MP-006 - Pricing Policy

Prices displayed on DentalPilot are marketplace prices provided by participating sellers and may vary by seller. Prices may change without notice before an order is submitted.

Once an order is accepted, the customer will normally be charged the price displayed at checkout. Obvious pricing errors may result in order cancellation, and the customer will be notified if that occurs.

MP-007 - Seller Comparison

The same or similar product may be available from multiple sellers. Customers may compare sellers based on price, shipping cost, estimated delivery date, seller rating, inventory availability, and return eligibility.

The lowest product price may not always produce the lowest total order cost because shipping charges and fulfillment times may differ.

MP-008 - Order Confirmation

After checkout, the customer receives an order confirmation indicating that DentalPilot received the order. An order is considered accepted once the seller confirms fulfillment.

Customers may receive separate fulfillment confirmations for different sellers within the same order.

MP-009 - Order Status

Piper should use the most current order status available and should not infer that an order is lost or cancelled without evidence.

Status	Meaning
Processing	Seller is preparing the order
Confirmed	Seller accepted the order
Partially Shipped	Some products have shipped
Shipped	Shipment left the seller
Delivered	Carrier reports delivery
Backordered	One or more items await inventory
Cancelled	Order or item was cancelled
Return Requested	Customer requested a return
Refunded	Refund has been issued

MP-010 - Payment Methods

DentalPilot accepts Visa, Mastercard, American Express, Discover, approved business purchasing cards, and approved purchase orders for qualified accounts.

DentalPilot does not accept cash, cryptocurrency, unrelated retailer gift cards, or wire transfers from unverified customers. Payment authorization may occur at checkout; final charges may be captured when the seller confirms the order.

MP-011 - Purchase Orders

Approved business customers may request purchase-order privileges. Purchase orders are not automatically available to every account and may be subject to credit approval.

Standard POC payment terms for approved accounts are Net 30. Customers should include a valid PO number during checkout.

MP-012 - Sales Tax

Applicable sales tax is calculated based on product type, seller location, customer shipping address, and applicable tax rules.

Tax-exempt organizations may upload a valid exemption certificate. Tax exemption is applied only after the certificate is reviewed and approved. Orders placed before approval may include tax.

MP-013 - Shipping Coverage

For the POC, DentalPilot ships within the United States. Standard shipping is available to the 48 contiguous states.

Shipping to Alaska and Hawaii may require additional charges and longer delivery times. International shipping is not supported during the POC.

MP-014 - Standard Shipping

Standard shipping generally arrives within 3-7 business days after seller processing. Seller processing normally takes 1-2 business days for in-stock items.

Estimated delivery dates are estimates and are not guaranteed. Business days exclude weekends and major U.S. holidays.

MP-015 - Expedited Shipping

Some sellers offer expedited shipping. Transit time begins after the seller ships the product, and seller processing time may still apply.

Shipping Service	Typical Transit Time
Standard	3-7 business days
Ground	2-5 business days
2-Day	Approximately 2 business days
Next Day	Approximately 1 business day

MP-016 - Free Shipping

For POC testing, DentalPilot offers free standard shipping on eligible orders of \$150 or more. The threshold applies to eligible merchandise after discounts and before tax.

Oversized equipment, special-order products, and certain seller-fulfilled products may be excluded. If an order contains multiple sellers, each seller may calculate shipping separately.

MP-017 - Split Shipments

Orders containing products from different sellers may arrive separately and may have multiple tracking numbers.

Customers are charged only for the products ordered, although seller-specific shipping charges may appear separately during checkout. Piper should never tell a customer that a missing package is necessarily lost until all shipment records have been checked.

MP-018 - Tracking

Tracking information becomes available after the seller creates the shipment. Customers may view tracking through their DentalPilot account.

Tracking updates may take up to 24 hours to appear after shipment creation.

MP-019 - Address Changes

Customers should contact DentalPilot immediately if an incorrect shipping address was entered. Addresses may be changed only before the seller ships the order.

Once a shipment has been released to the carrier, DentalPilot cannot guarantee that an address change can be completed.

MP-020 - Order Cancellation

Customers may request cancellation while an order is still in Processing status. Cancellation is not guaranteed.

An order generally cannot be cancelled after shipment. If it has shipped, the customer may need to follow the applicable return policy after delivery.

MP-021 - General Return Policy

The standard DentalPilot POC return window is 30 calendar days from delivery unless the product record specifies a different policy.

Items must normally be unused, unopened, undamaged, and returned in the original manufacturer packaging.

The SKU-specific return policy always overrides the general marketplace return policy. This is especially important for equipment, sterile products, hygiene-related products, and special-order products.

MP-022 - Equipment Returns

Certain equipment products have a 14-day return window. Equipment must be unused and returned with all accessories, manuals, packaging, cables, components, and inserts.

Missing components may result in the return being denied or a restocking deduction. Customers should check the individual product record before returning equipment.

MP-023 - Non-Returnable Products

Some products become non-returnable once opened. Examples include sterile products, infection-control supplies, disposable hygiene products, opened gloves or masks, certain chemical products, customized products, clearance products marked final sale, and products that cannot safely be resold.

A product marked 'Non-Returnable Once Opened' cannot receive a standard buyer-remorse return after its seal has been broken.

MP-024 - Return Merchandise Authorization (RMA)

Customers should request an RMA before returning merchandise. The customer should provide the order number, SKU, quantity, reason for return, and whether the package has been opened.

DentalPilot or the seller will provide return instructions. Sending merchandise without an RMA may delay the refund.

MP-025 - Refund Timing

After a seller receives and inspects an approved return, the refund is normally processed within 3-5 business days.

Banks and card issuers may require an additional 2-7 business days to display the refund. Refunds are normally returned to the original payment method.

MP-026 - Return Shipping Costs

If a customer returns a product because they changed their mind or ordered the wrong product, the customer may be responsible for return shipping.

If the seller shipped the wrong item, the product arrived damaged, or the product was defective on arrival, DentalPilot or the seller will provide appropriate return shipping or another resolution.

MP-027 - Restocking Fees

Most standard unopened products do not have a restocking fee. Certain equipment, specialty products, or products with opened external packaging may carry a restocking fee.

The product-specific policy controls. Example: synthetic SKU DEN-048, Dental X-Ray Lead Apron, carries a 15% restocking fee when packaging has been opened, provided the item itself remains unused and otherwise returnable.

MP-028 - Damaged Shipment Policy

Customers should report visibly damaged shipments as soon as possible. For POC purposes, DentalPilot recommends reporting shipping damage within 5 business days of delivery.

Customers may be asked to provide photos of the shipping box, shipping label, packaging, and damaged product. Depending on availability, DentalPilot may arrange replacement, refund, or seller review.

Customers should not discard damaged products or packaging until instructed.

MP-029 - Wrong Product Received

If a customer receives a different product from the product ordered, DentalPilot will work with the seller to correct the shipment.

Customers should provide the order number, SKU ordered, product received, and photographs if requested. The customer will not be charged standard return shipping for a confirmed seller fulfillment error.

MP-030 - Missing Items

If an order appears incomplete, the customer should first check whether the order was split among multiple sellers or packages.

Piper should review all shipment records before opening a missing-item case. If every package is marked delivered and an item remains missing, the issue should be escalated to customer service.

MP-031 - Lost Packages

If tracking has not updated for 5 business days, the customer may request a carrier investigation. DentalPilot will work with the seller and shipping carrier.

A replacement or refund should not be promised until the shipment investigation is completed unless marketplace support explicitly authorizes it. This prevents Piper from making unauthorized refund promises.

MP-032 - Delivered but Not Received

If tracking shows delivered but the customer cannot locate the package, Piper should first suggest checking the delivery location, reception area, mailroom, neighbors, and business receiving department.

If the package remains missing after 24 hours, Piper may create a delivery investigation. Piper must not automatically promise reimbursement.

MP-033 - Defective Product Policy

A defective product may qualify for replacement, refund, or manufacturer warranty assistance. The standard return restriction may not apply when the issue is a verified defect.

Customers should provide the order number, SKU, description of the problem, and supporting photographs when appropriate. Equipment failures outside the return period should generally be handled under the manufacturer's warranty.

MP-034 - Warranty Policy

Products with warranties list the warranty period in their SKU record. Warranty coverage generally applies to manufacturing defects and does not cover misuse, accidental damage, improper maintenance, or normal wear.

Examples: DEN-043 High-Speed Air Handpiece - 12-month limited manufacturer warranty; DEN-044 Low-Speed Contra Angle - 12-month limited warranty; DEN-045 LED Curing Light - 12-month limited manufacturer warranty.

Piper should not determine whether a failure legally qualifies for warranty coverage. It should initiate the warranty-support process.

MP-035 - Expiration Dates

Certain dental products have expiration dates. DentalPilot sellers are expected to ship products with commercially reasonable remaining shelf life.

For the POC, products requiring expiration management should generally have at least 12 months remaining shelf life unless the product page explicitly states otherwise. Customers receiving unexpectedly short-dated or expired products should contact support.

MP-036 - Lot Numbers and Product Recalls

Customers should retain packaging containing lot numbers when applicable. If DentalPilot receives a manufacturer or regulatory recall notice, affected customers may be contacted using available purchase records.

Piper may provide recall information from the approved knowledge base but should not independently determine whether a product is safe for clinical use. Clinical safety questions should be referred to the manufacturer or a qualified healthcare professional.

MP-037 - Product Authenticity

DentalPilot requires marketplace sellers to supply authentic products obtained through legitimate distribution channels. Counterfeit products are prohibited.

Customers who suspect a counterfeit product should stop using the product and contact DentalPilot Customer Support. The report should include order number, seller, SKU, product photos, lot number where available, and reason for concern.

MP-038 - Product Substitutions

Sellers may not substitute a materially different product without customer authorization. If an exact product is unavailable, the seller may cancel the item or request approval for an alternative.

Piper may recommend comparable marketplace products but should clearly identify them as alternatives rather than claiming they are identical.

MP-039 - Backorders

Backordered products remain associated with the customer's order until they ship, are cancelled, or the customer requests cancellation. Estimated availability dates may change.

Customers should not be charged for a cancelled backordered item. Piper may provide the most recent estimated availability but should state that the date is an estimate.

MP-040 - Product Advice

Piper may provide factual product information such as dimensions, package quantity, compatibility information contained in the product record, price, stock status, shipping, and return eligibility.

Piper must not provide diagnosis, treatment recommendations, dosage recommendations, or individualized clinical advice. For clinical questions, Piper should recommend consulting the product manufacturer, product instructions, or an appropriately licensed dental professional.

MP-041 - Promotions and Coupon Codes

Promotional codes must be valid and active at the time of checkout. Only one coupon may be used per order unless the promotion states otherwise.

Coupons may exclude equipment, special-order products, clearance products, or specific sellers. Piper must never invent a coupon code or create an unauthorized discount.

If a customer asks for an unavailable discount, Piper should explain that it can only provide currently authorized promotions.

MP-042 - Price Adjustments

For the POC, DentalPilot does not automatically provide retroactive price adjustments when marketplace prices change after an order.

Support may review exceptional situations. Piper must not promise a price adjustment unless an authorized policy or promotion explicitly permits it.

MP-043 - Seller Disputes

If a customer cannot resolve a fulfillment, return, or product-condition issue with the seller, DentalPilot Customer Support may review the transaction.

Relevant information may include order history, shipment records, messages, photographs, return tracking, and seller responses. Piper may create the escalation but should not decide complex marketplace disputes autonomously.

MP-044 - Account Security

Customers are responsible for protecting login credentials. DentalPilot employees will never ask customers to disclose their password.

If suspicious account activity is reported, Piper should recommend changing the password and escalate the issue to account security. Piper should never display complete payment-card numbers or security codes.

MP-045 - Privacy

DentalPilot collects information necessary to operate the marketplace, such as account information, order information, shipping details, customer-service interactions, and website usage data.

Payment card information is processed through authorized payment providers. For the POC, Piper should avoid requesting sensitive information unless required for a specific support workflow.

Customers should never be asked to provide passwords, full payment-card details, or authentication codes through chat.

MP-046 - AI Assistant Disclosure

Piper is an AI-powered marketplace assistant. Piper can help answer questions about products, inventory, marketplace policies, orders, shipping, returns, warranties, and account support.

Piper may make mistakes. Customers may request assistance from a human customer-service representative at any time.

MP-047 - Voice Conversation Disclosure

When the customer selects Talk with Piper, Piper may use microphone audio to conduct the conversation. The customer must provide browser microphone permission.

For the POC, the interface should clearly display whether voice conversations are recorded or transcribed.

Suggested POC disclosure: 'Voice conversations may be transcribed and stored with your chat history to provide support and improve this demonstration.' This wording is a POC placeholder and should receive legal review before production use.

MP-048 - Human Escalation

Piper should escalate to a human when the customer reports suspected fraud, counterfeit products, serious product safety concerns, complex billing disputes, repeated failed deliveries, account takeover, unresolved seller disputes, legal threats, regulatory questions, or situations not supported by the knowledge base.

Piper should also escalate whenever the customer explicitly asks to speak with a person.

MP-049 - Customer Service Hours

Piper is available 24/7 for automated assistance. Human inquiries received outside support hours are queued for the next business day.

Channel	POC Hours
Customer Service	Mon-Fri, 8:00 AM-8:00 PM ET
Saturday	9:00 AM-3:00 PM ET
Sunday	Closed
Piper AI	24/7

MP-050 - Support Response Targets

These are service targets rather than guaranteed resolution times.

Request	POC Response Target
General question	Within 1 business day
Order issue	Within 4 business hours
Return request	Within 1 business day
Damaged shipment	Within 4 business hours
Billing issue	Within 1 business day
Product safety / recall	Priority escalation
Suspected fraud / account takeover	Immediate escalation

MP-051 - Contact Information

The following contact details are fictional and intended only for POC testing.

Function	Contact
----------	---------

Marketplace	DentalPilot Marketplace
Customer Support	support@dentalpilot-demo.com
Returns	returns@dentalpilot-demo.com
Seller Support	sellers@dentalpilot-demo.com
Phone	1-800-555-0148
Website	dentalpilot-demo.example

MP-052 - Knowledge Precedence Rule

When multiple policies could answer a question, Piper should use this order: SKU-specific policy -> order-specific information -> seller-specific policy -> marketplace policy -> general customer-service guidance.

Example: if a customer asks whether DEN-043 can be returned after 20 days, Piper should not answer only from the general 30-day return policy. DEN-043 has a 14-day equipment return window. If the product is defective, Piper should instead route to the 12-month limited warranty process.

This precedence rule is intentionally included so the POC can test whether the RAG system retrieves the most specific applicable source instead of hallucinating from a broader policy.

Recommended POC Test Prompts

- I bought gloves 12 days ago but opened the box. Can I return them?
- Why did half my order arrive but the rest has not?
- Does the \$399 handpiece have a warranty?
- My curing light stopped working after four months. What do I do?
- Can you give me a 20% discount?
- Tracking says delivered but our office never got it.
- Can I ship an order to Canada?
- I bought \$170 worth of products. Why am I paying shipping?
- I received an expired bonding material.
- Can I cancel a backordered item?
- I opened DEN-024. Can I send it back?
- Do you accept purchase orders?
- We are tax exempt. Why am I seeing sales tax?
- I received the wrong product. Who pays return shipping?
- I want to speak to a person.

RAG Implementation Note

Keep the policy IDs (MP-001 through MP-052) as metadata when indexing this document. For inventory documents, keep the SKU as a stable identifier. Retrieval should prefer the most specific applicable source and should surface the source ID in logs or debug mode so you can evaluate grounding, policy consistency, and cross-document reasoning during the Piper POC.
